DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please renumbered 2nd occurrence of original "claim 31" as -- claim 32 --.

Please renumber original claim 32 as -- claim 33--.

Allowable Subject Matter

2. Claims 1-8, 10-11, and 18-24, and 26-33 are allowed.

3. The following is an examiner's statement of reasons for allowance: The present invention features controlling a sense array of memory to sense word group from a first address.

Closed related prior art:

US 2005/0135148 (Chevalier) teaches memory plug having a first terminal in electrical communication with the first conductive array line and a second terminal in electrical communication with one of the second conductive array lines, each memory plug configured to store an element of an information set; and a plurality of sensing circuits each configured in electrical communication with an associated one of the

second conductive array lines and the memory plugs, so as to substantially simultaneously sense the elements of the information set.

US 2004/0019756 (Perego et al) teaches configuration logic loading first data from the first memory array into the first sense amplifier and substantially simultaneously loads second data from the second memory array into the second sense amplifier in the first memory-access mode.

US 6,212,121 (Ryu et al) teaches system that provides sub-arrays of different sizes and can reduce the number of the sub-arrays and the number of the sense amplifier regions such that maximum current for sensing during simultaneous accesses of multiple arrays can access two sub-arrays with different bit line loadings and avoid simultaneously accessing two sub-arrays having high bit-line loadings.

However, none of the prior art teaches or renders obvious the features of the claims, specifically:

controlling a sense array to sense a second word group from a second address of memory, wherein the second address is at a non-contiguous initial address with respect to a first address: and controlling the sense array to sense a third word group from a third address of the memory, wherein the third word group corresponds to the width of the first and second word groups combined.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
